

WEB CALLBACK

GET IN CONTACT WITH POTENTIAL CUSTOMERS IN REAL TIME

Our service, Web Callback, helps existing and new customers to get in touch with you in a convenient way. They do not have to wait in any phone queues as they can instead be called via a simple form on your website.

BE FASTER THAN YOUR COMPETITORS

Traditionally, a customer needs to take several steps to call an organization. Simplicity is a crucial factor today when it comes to converting visitors of your website to actual customers. Lack of management of incoming leads causes many companies to lose potential customers already in the contact phase.

Many customers do not feel motivated enough to carry out the phone call themselves or simply choose to search for easier solutions with one of your competitors. Web Callback connects your website visitors to your business within seconds.

CONNECT WITH YOUR CUSTOMERS DIRECTLY OR ON A SCHEDULED TIME

Web Callback calls the potential customer and someone in your organization at the same time, this works both for sales teams and support. You can either get in contact

directly or at a specific time that the customer chooses. No emails, texts or other unnecessary steps.

YOUR BRAND IDENTITY

Because Web Callback is on your website, it's important that the service follows your brand identity. Choose color, text and image that fits your organization's graphic profile.

WEB CALLBACK WILL:

- Give potential customers motivation to call.
- Increase the number of leads.
- Create instant sales contacts.
- Impress leads through your quick feedback.
- Give better control over incoming calls.
